Hey Rosalie,
I just talked with Jeff about w-r timing in the Delta. The Delta analysis in the BO relies on the attached w-r timing data for Chipps and salvage. Looks like the Chipps peak would occur sooner than April, more like the second to third week in March. The observed salvage data is consistent with this timing (i.e., peak in March).

Naseem,
Can you update the Environmental Baseline timing table (2.4.3-1) so that Chipps is identified as medium occurrence? It's currently shaded as high occurrence, but these data do not support that. Alternatively, just give me the ok to modify the file, let me know which one to use, and I'll do it.

Thanks,
Brian

- DJFMP data, including Chipps, available at: [https://www.fws.gov/lodi/juvenil...](https://www.fws.gov/lodi/juvenile_fish_monitoring_program/jfmp_index.htm); current 2012-2019 spreadsheet posted on that website (uploaded 4/17/19) is attached.
- You can query data from various monitoring sites, including Chipps, at SacPAS -- see, e.g. [http://www.cbr.washington.edu/sacramento/tmp/hrt_1556752562_269.html](http://www.cbr.washington.edu/sacramento/tmp/hrt_1556752562_269.html)
- Hottest off the press DJFMP data, including Chipps, available at: [https://dev.baydeltalive.com/...](https://dev.baydeltalive.com/fisheries/djfmp-highlights) -- use the "DJFMP catch snapshot" query tool at the bottom of the page; enter "Chipps CHN Winter" in the search box to see only WR catch at Chipps in your specified date range.

Hi Jeff and Barb,
Do you have recent MWT data at Chipps Island you can share with me? Looking specifically for winter run sized fish. I'm okay if you just send me the spreadsheets.
Thanks!
Rosalie
