**Subject:** Re: American River Effects Section Questions

Hi Brittany,

1. Often "lower American River" is used to denote the section below Nimbus Dam is being discussed, as opposed to the upper watershed. It probably doesn't matter that much as the PA does not involve the upper watershed, but let's use lower American River throughout our for consistency. Thanks.

2. This is a good clarification to make. I'm pretty sure the below Nimbus Dam model results location is immediately downstream from Nimbus Dam, but please confirm with the lower American River map of model results locations that Reclamation provided.

Barb,  
Where can Brittany find that map?

Thanks,  
Brian

Hi Brian and Joe,

I have a couple (I am hoping quick) questions for you about the American River Effects section. The below questions / requests come from Garwin's comments in the American Division that I haven't been able to address.

1. What is the distinction between American River and lower American river?
  - For example the "Juvenile Rearing" section (2.5.4.1.2) uses simply American River, while several sections below specify lower American River. Is this intentional?
2. The first two Exceedance plots give their location as "Below Nimbus Dam". Do we have a more specific idea of where this is?

Thank you for your help,

Brittany
